DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a vector, which may be a retroviral vector, and cells comprising such, classified in class 435, subclass 325.
- II. Claims 7-9, drawn to truncated Flk-1 receptor protein, classified in class 530, subclass 350.

The inventions are distinct, each from the other because of the following reasons:

The polypeptide of Invention II is related to the nucleic acids of Invention I by virtue of encoding same. The DNA molecule has utility for the recombinant production of the protein in a host cell. Although the DNA molecules and proteins are related since the DNA encodes the specifically claimed protein, they are distinct inventions because they are physically and functionally distinct chemical entities, and the protein product can be made by another and materially different process, such as by synthetic peptide. Further, the DNA may be used for processes other than the production of the protein, such as nucleic acid hybridization assay, or for the purpose of producing transgenic animals.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.
